

# Meeting Notes

---

## Todo:

- submit late presentation
  - ^ this might have cost us the awards 😞
- finish the Hand-off docs
  - add the tech doc to the repo / total hand-off docs

## Feedback

- tech doc was BS-ing a little (metrics, early process)
- final presentation was submitted late
- missing peer-evals and course evals in the dashboard (just the initials tho)
- peer evals
  - nothing too outstanding or obvious
  - alex made a come back 😏
  - brooke fell from grace
- presentation feedback GOOD
  - fun, interactive demo
  - good explanations of the computer vision stuff and hardware BAD
  - demo kinds went off the rails
  - not enough explanation into computer vision stuff
- coach & sponsor at the same time was difficult. Little actual coaching was done

## Ideas for the future

- research project
  - have a thesis-defense style final presentation with sponsors (who will be a few RIT professors) where the students can go into detail about the technical research that was done on the project.
  - the focus should be more on the results of the research rather than features
  - coach who has experience running research teams
  - make Imagine RIT a requirement? (to force research done into fun interactive features)
  - force the process methodology? (instead of choosing one)
- team size
  - 6 was too many, 4 could be a better size
